

BROWSE OUR MEDICAL TERMINOLOGY GLOSSARY

*User can either use the search bar or select a letter.

If the letter is chosen the user will be directed to a page with all terms that start with that letter.
Search bar results in normal search functionality and will provide the best matches for the term.

Improvements made between first and second versions

1. With the second version everything is happening on the same page. Whereas in version one, you are taken to a different page with every click.
2. With the second version, the left nav menu allows you to continue to click through the alphabet. In the first version, you must navigate back to the home page or use the search function in order to select a different letter.
3. The second version includes the side nav, giving you access to the alphabetical list, a search bar, and everything happens within the same page.
